Allowable Subject Matter

The following is an Examiner's statement of reasons for the indication of allowable subject matter:

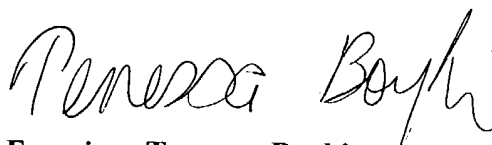

Applicants' claimed invention is directed to a reversed cubic or reversed hexagonal phase material comprising water or glycerol or a water/ glycerol mixture, an anesthetic and a surfactant as claimed. The crux of the invention lies in the discovery that the particular claimed invention unexpectedly provides coated particles that are suitable for solubilizing or containing a wide variety of materials, including materials sensitive to physical, chemical or biological deterioration wherein the coated particles release one or more materials disposed within a matrix in their internal cores without requiring the destabilization of that matrix and while avoiding the problems commonly associated therewith. These coated particles sharply initiate the release or absorption of one or more materials to or from a selected environment in response to one or more physical or chemical triggers. The claimed invention also provides coated particles that provide a wide variety of coated particle systems that can be tailored to the particular physical, chemical and biological requirements of their particularly desired use, a porous coating that permits pore-controlled release of materials disposed within them or pore-controlled absorption of materials disposed without them. In addition, unlike the prior art, the claimed invention also provides coated a process for preparing coated particles thereof without entailing harsh physical and/or chemical conditions.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
